

Agility International Helps Build Typhoon-Proof Housing in Saipan

Northern Mariana Islands
Saipan

Agility International & Ironwood Saipan

-  Logistics project management
-  Vendor management
-  Freight consolidation
-  Ocean, air, road shipments
-  Asset management
-  Customs clearance
-  Proof-of-Delivery processing

Our Work in Saipan

Agility International provided the logistics for a complex pilot project on the South Pacific island of Saipan, managing shipping for Ironwood Saipan, an 80-unit, energy efficient affordable housing community built to withstand typhoons. Agility's reputation and global network helped the developer, Ironwood Property Management, attract financing and investment from Citibank and Goldman Sachs.

Agility Solution

- Investors required Ironwood to use a provider that could guarantee door-to-door management of construction materials coming from 60 vendors in China, Taiwan, the Philippines, Canada and the United States to the construction site on Saipan, a U.S. commonwealth 120 miles north of Guam.
- Agility worked directly with vendors from the time of purchase order to delivery at Ironwood warehouse facilities on Saipan. Agility sent 150 containers to vendors' facilities; consolidated Less than Container Load shipments; and tracked outbound loads.
- It was responsible for: asset management, air freight, customs clearance, and processing proof-of-delivery, along with movement of Full Container Loads (FCLs) and Flat Racks. Shipments contained drywall, panel fixtures, roofing, solar panels, steel, counter tops, and playground equipment.
- "Agility's worldwide team provided value-added services that enabled timely completion of our project." – Sean K. Easter, Vice President Development & Construction, Ironwood Property Management Guam
