About Agility

Agility Afghanistan has offered logistics support to customers across industries for more than 10 years, leveraging expertise in duty exemptions and experience in supporting government and diplomatic agencies. Agility excels in heavy-lift handling, overseeing more than 120 heavy-lift air charters and flights, as well as 65 Antonov AN-124 charters. Agility supports project logistics and develops customized solutions for customers' unique needs. For example, Agility successfully shipped a 100-megawatt diesel power plant to Kabul and met all deadlines and expectations.

Services

- Air Freight
- Ocean Freight
- Road Freight
- Contract Logistics
- Project Logistics
- Fairs & Events Logistics
- Chemical Logistics

Customer Examples

Managing the largest commercial airlift in Afghanistan's history

Agility moved more than 10,000 tons (11,560 line items) via air freight between July 2008 and March 2009 in support of the USAID-funded Kabul Power Plant. Agility managed almost 122 heavy-lift air charters and at least 65 AN-124 flights with heavy loads into Kabul. The cargo was for a plant designed to provide a more reliable power supply to the population of Afghanistan. Beyond moving the cargo, Agility also provided destination services such as offloading, import customs clearance, transportation and delivery.

Multimodal heavy lift from Germany to Kabul exceeds expectations

Getting 150 oversized concrete walls from Germany to Afghanistan wasn't an easy task, but Agility was up to the challenge. Working for the German Embassy, Agility used a road-rail-road method in 2010 for the move. The shipment was routed via the C.I.S. into Afghanistan's Hairatan Port, then transferred for road transport 450 kilometers from Kabul to Salang Pass. Agility ensured a timely completion of port clearance formalities, customs clearance documentation, and transportation and delivery efforts.
