About Agility

Agility China offers a strong coverage for most parts of China, with 20 offices across the country. Agility's air freight experts design routes and develop solutions that underscore flexibility and frequency. Customers relying on road freight turn to Agility's extensive network linking 300 cities in China. Offering nationwide and regional services, and covering China's high-growth economic regions.

Services

- Air Freight
- Ocean Freight
- Road Freight
- Contract Logistics
- Project Logistics
- Fairs & Events Logistics
- Chemical Logistics

Customer Examples

Agility China expert in digitally connected logistics

As one of the world's largest Hi-tech companies on the list of Fortune 500, the customer is very sensitive on transit time and security in the complete end to end supply chain process. Agility provided the IoT device for the customer to attach with the consignment where the IoT device can calculate location using GPS technology and humility during the journey. Besides that, Agility was able to work with our core carriers to protect space during the seasonal product launch period. Our logistics expertise in China also established a Hyper-Care procedure from end to end monitoring on every single track point; direct service with less touch point and shorten lead time; and most important is the security feature we provide to the customer with Hyper-Care packaging in order to maintain high security level before consignments were delivered to the Distribution Center.

Regional distribution center solves shipping challenges in China

One of the world's leading manufacturers of sealing solutions for cables and pipes used in industries from telecom to shipbuilding turned to Agility to solve its shipping challenges in China. Using our logistics expertise, we set up a regional distribution center in the Yangshan Free Trade Port Area to handle goods shipping in and out of China. Agility managed all warehouse operations, including inbound receiving and unloading of pallets, trucks and containers. We provided SKU tracking and RF S/N barcode scanning. Our strategic location near Yangshan Deep Sea Port was cost-effective for shipping from European countries, and RF scanning allowed end-to-end visibility for our customer.
