About Agility

Agility Denmark is well positioned to serve customers in the life sciences and project logistic industries. Customers benefit from full visibility into their freight through Agility's technology-forward solutions. Applications allow customers to track their shipments, freight flows, and financials.

Our cold supply chain capabilities include temperature controlled transportation and warehousing. Expertise in project logistics, fairs & events, cruise line logistics and contract logistics.

Services

- Air Freight
- Ocean Freight
- Road Freight
- Project Logistics
- Chemical Logistics
- Warehousing & Distribution

Customer Examples

World-class warehouse manages suppliers, consolidates cargo for oil and gas company

Agility's client, an oil & gas company, had successfully developed the field's thin reservoirs across vast distances. It had difficulty managing its European suppliers of goods and equipment. Garbled communications and lack of an efficient control system led to delivery delays and escalating costs. We brought order to the process by managing all European suppliers and consolidating cargo in Esbjerg, where we operate a world-class warehouse. From that warehouse, we could ensure that suppliers meet uniform cargo readiness, customs documentation and cargo-marking standards. We also established checkpoints and pickups to keep track of all supplier movements in real time.

Fully GDP-certified warehouse ensures compliant pharma shipping from India to Europe

A global pharmaceutical company with a wide base of contract manufacturers in India was having multiple challenges sending its finished products to Europe under cold-chain compliant conditions. The biggest problem was lack of GDP-compliant facilities and equipment. The company also wanted to improve its container utilization rate and implement a reliable deconsolidation service model for product distribution in Europe. Utilizing our Pharmaceutical Competency Center at Nhava Sheva Port in Mumbai, Agility manages and oversees supply from point-of-order to delivery. Shipments are transported using LCL consolidated ocean freight service before final distribution by a temperature-controlled trucking network. As an added distinction, the fully GDP-certified facility in India is also customs bonded.
