## About Agility

Agility connects Germany with the rest of the world through our modern air freight hub in Frankfurt and ocean freight gateways in Hamburg and Dusseldorf. Our road freight service offers 120 daily scheduled network connections to and from more than 70 stations in Europe. Exhibition centers in Berlin, Frankfurt, Dusseldorf and Hanover have long relied on our dedicated fairs and events team to orchestrate the complex and time-sensitive logistics that underpin domestic and international shows.

With 15 offices in Germany, we are readily accessible to customers. Our customers span a range of industries such as technology, industrial goods, automotive, pharma and life sciences.

## Services

- Freight Forwarding (air, ocean, road)
- Warehousing & Distribution
- Supply Chain Solutions
- Customs Clearance
- Project Logistics
- Chemical Logistics
- Fairs & Events

## Customer Examples

### Keeping auto parts coming to avoid \$9 million/day product line shutdown

For a U.S. manufacturer of medium-sized and heavy trucks and diesel engines, it's critical to operate an uninterrupted production line. A production stoppage can cost \$9 million a day. Agility ensures that doesn't happen by providing a 365-day 24/7 on-board courier service for urgent orders of truck and engine parts. When the Agility office in Stuttgart, Germany, received an urgent order for parts late one night, it got them from Romania, transported them to Germany, and put them on a passenger flight that day using an on-board courier service. The parts were delivered the following morning, on time. Agility also manages the company's European procurement and export operations.

### Shipping and storage expertise for oversized, delicate freight

Oversized passenger and freight elevators are both really large and really delicate. Moving them requires a partner like Agility, who provides expertise, a global network of storage facilities, and equipment big enough to handle the job from production shop floor to final delivery. We begin by inspecting the goods at the production site and providing tailor-made packaging for each elevator. They are transported to the Agility facility in Stuttgart for additional packing and storage until a customer orders one; then, we fulfill that delivery to any location by air, ocean or road freight. Agility's customized approach optimizes storage space and ensures each elevator shipped meets country-specific regulations (IPPC-Standard).

### Ensuring global tech giant's products hit shelves on time, in perfect condition

Technology companies compete in a fast-paced global environment. New technologies and products are introduced to consumers under tremendous time constraints, and the firms providing them face specific logistical requirements to meet seasonal demands and get products on shop shelves around the world. One Japan-based global manufacturer of graphics tablets and related products has benefited from our customized transport and logistics solutions. We get their products to destinations on time – and in perfect condition. Agility Germany manages procurement functions and provides packing/repacking, localization services and integrated reverse logistics at our modern logistics facilities in Dusseldorf. Our services include customs clearance, fiscal representation and ESD areas. Our road freight network handles delivery within Germany and southeast European countries.
