

# Italy

## Facts Italy

### Major Office Locations

- Ancona, Malpensa, Milan, Turin, Verona

### Airports Served

- FCO, MXP, TRN, VCE, VRN

### Ports Served

- AOI, GIT, GOA, LIV, NAP, SPE, TRS, VCE

### Warehouse Space

- 10,580 sqm

### Certifications

- ISO 9001 / ISO 14001
- OHSAS 18001
- SQAS
- AEO-F
- GDP
- Dangerous Goods/Hazmat License

### Head Office

Agility Logistics Srl  
Strada Vecchia Paultlese 5/A  
20090 Pantigliate MI  
Italy

## About Agility

Agility Italy offers air, ocean and road freight, fairs & events and projects logistics.

Agility's weekly consolidation services, both air and ocean, include freight into and out of major international locations, with a special focus on our top trade lanes: Middle East, Canada, USA, Brazil, China and India.

Our road freight departures include more than 30 European destinations, as well as Eastern countries.

Excelling in the events area, Agility's team keeps exhibition cargo and special deliveries moving on time to global venues.

Last, but not least, charter vessels for breakbulk, heavy lift and oversized cargoes are accommodated by our project logistics division around the world.

## Services

- Air Freight
- Ocean Freight
- Road Freight
- Supply Chain Solutions
- Warehousing & Distribution
- Project Logistics
- Fairs & Events

## Customer Examples

### Door-to-door delivery for 50 sports cars on one Boeing 747-8

What do you do when asked to move 50 cars door to door from Hiroshima, Japan, to Milan – all by air, all in one go? You build the largest flying garage! A global auto company was introducing a new sports car to Europe, and cars had to be flown from Japan to Milan on one plane: a Boeing 747-8. Agility designed double-stack racks to fit 50 cars in one plane. For comparison, usually one to five cars are shipped at a time. Agility also prepped the cars for flight by transporting them 900 km from the factory to Narita airport. Once the cars arrived in Milan, Agility trucked them to showrooms in six European countries.

### Rail/road plan for 11,200-km trip cuts travel time by 50%

When a global provider of air treatment solutions needed to move its air compressors from China to an assembly line in Italy, they wanted to do it quickly and cost-effectively. Agility recommended a combination of rail and road freight for the 11,200-kilometer journey; it's cheaper than air freight and faster than ocean freight. Compressors from a factory in Chongqing, China, were transported by rail through Kazakhstan, Russia, Belarus and Poland, and arrived 17 days later in Duisburg, Germany. Finally, the containers were loaded onto trailers and delivered to Italy. The innovative cross-border solution reduced transit time by as much as 50% compared to ocean freight, and 65% compared to air freight.

### Reliable door-to-door flow of parts from Asia to Europe keeps automaker in production

A leading vehicle maker need better visibility into dozens of manufacturing and assembly plants worldwide; a reliable flow of parts from China, India and other Asian nations; and faster door-to-door transit times to reduce shipment delays. Agility was appointed to manage the company's logistics. The first step was to install a control center in Turin. Next, procedures were implemented to track every single container, shipment and part number door-to-door. Our plan included customized track and trace EDI solutions, and buyer consolidation and container optimization. Agility also made emergency plans to ensure nothing could bring business to a halt. Today, the customer relies on Agility to manage parts from China, India, Thailand, South Korea, Japan and Vietnam to multiple plants across Europe and Latin America.
