About Agility

Agility Malaysia offers cross-border road freight services linking all of South-East Asia and we also have reliable connections with air and ocean freight carriers. Agility provides temperature-controlled storage and tailored solutions for customers' most discerning needs. Aiming to serve its customers with 24/7 support services, Agility owns strategically located hubs, which allow Agility to offer door-to-door transit windows of 24 to 72 hours.

Services

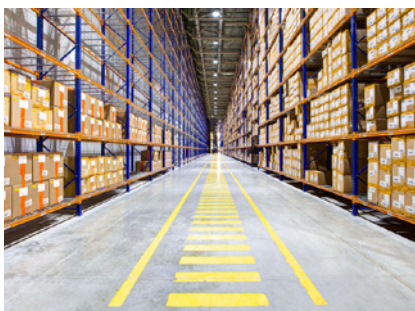

- Air Freight
- Ocean Freight
- Road Freight
- Contract Logistics
- Project Logistics
- Fairs & Events Logistics

Customer Examples

Supply chain management improves sales for global solid state drive manufacturer

One of the world's largest computer solid state drive manufacturers asked Agility to manage its supply chain. They needed on-time delivery; we offered proven expertise and experience in global supply chain management. Agility manages the company's inbound air freight shipments from Thailand and Malaysia and distributes them to 15 countries within Europe using a combination of air, ocean and road freight. An Agility control tower in the Netherlands monitors all inbound shipments and serves as a central point of contact. We also provide seamless visibility and real-time updates for all shipments with our proprietary track and trace system, electronically connected via EDI to the company's in-house systems. As a result, the company has become more nimble in its response to global demand – and increased sales.

Warehousing and last mile distribution for premium wellness company requires precision, timeliness

A leading American wellness company needed Agility's help with logistics in Malaysia. The U.S. based company runs an international operation selling premium essential oils and related products. Agility's reputation for expertise in this segment of the Malaysian market led to a 2-year contract as logistics service partner. The company's Business to Customer model requires that orders must be individually selected and packaged for the end consumer; accordingly, Agility must fulfill high expectations to ensure the accuracy of the order, timeliness of delivery and the quality of the parcel when it reaches the consumer. In addition to delivery of finished goods, Agility also handles the inbound, outbound and returns operations.

Project management increases city's transit capacity from 480,000 daily rides to 2 million

Malaysia is investing in a high-capacity Mass Rapid Transit (MRT) system that is expected to cover a 20km radius from the city center with a length of approximately 150km. When the system is complete, the MRT will serve up to 2 million passengers per day – an increase from the current system's 480,000 trips. Malaysia asked Agility to be its partner in this venture to enhance Kuala Lumpur's competitiveness and standing as a global city. We transported the customer's transformer from Korea, its switchgear from Switzerland and multiple accessories from around the world. Agility also transported parts via air and ocean freight, and the scope of work included customs clearance, staging and storing materials in Agility's warehouses. We also facilitated transportation services for parts delivery to the customer's engineering team for a duration of nearly three years.
