About Agility

The Netherlands serves as the gateway to Europe for many international businesses due to the country's strategic location and commerce-friendly tax structure. Agility acts as a Fiscal Representative so that non-EU companies can take advantage of VAT refunds or usage of local deferment systems without registration in that particular country. Agility is more than prepared to meet each customer's unique demands for warehousing and multi-modal transport. The port of Rotterdam and Amsterdam's Schiphol airport are accessible hubs for ocean freight and air freight shipped by our customers in the chemicals, industrial and retail sectors. Cargo bound for Europe and eastern destinations are moved round the clock over our extensive road freight network.

Services

- Freight Forwarding (air, ocean, road)
- Warehousing & Distribution
- Cross-border Trucking
- Customs Clearance
- Project Logistics
- Chemical Logistics

Customer Examples

Maintaining a lucrative pipeline for a major oil company

Success or failure in the oil and gas industry depends on how quickly drilling results in the production and extraction of oil or gas. Working with one of the world's largest oil companies in Poland, Agility custom-built wooden racks that reached up to seven stories high to store 4,500 pipes in five different sizes. These pipes were transported to conveyor plants in Poland under strict safety regulations. Agility is also the company's freight forwarder, importing and exporting geological equipment and gas samples classified as dangerous goods (DGs) in 20-liter cylinders to Germany, the U.K. and the Netherlands. Agility gets these DGs between borders by handling the customs clearance documentation on the company's behalf.

Mastering a major supply chain through real-time tech tools

Our client has a reputation as one of the largest computer hard disk drive manufacturers in the world; on-time delivery is a critical factor in its success. Agility manages its inbound airfreight shipments from Thailand and Malaysia, then distributes to 15 countries in Europe using air, ocean and road freight. We set up a regional control tower in the Netherlands to monitor all inbound shipments. The client maintains visibility through our proprietary track-and-trace system, which is connected via EDI to in-house Oracle and Compass systems. This gives the client real-time shipment updates and enables quicker, more efficient responses to global demand. As a result, the client has improved sales.
