Leveraging our 3PL and 4PL capabilities we serve customers across different industries with the main focus on Industrial, oil & gas, high-tech, consumer goods and retail sectors.

## Services

- Air Freight
- Ocean Freight
- Road Freight
- Rail Freight
- Customs Clearance
- Supply Chain Solutions
- Warehouse & Distribution
- Project Logistics

## Customer Examples

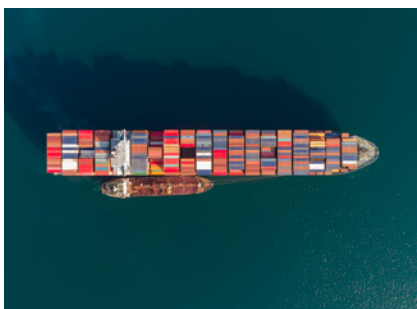

### Rail solution for Hi-Tech customers

Within last several years Agility Russia has been successfully developing Hi-Tech industry vertical. On top of the general high standards towards transit time and documentation flow, this vertical is characterized by its enhanced requirements on cargo safety and security, big number of origins within one country and 24/7 shipment visibility. In collaboration with one of the world's leading Hi-Tech company in China Agility has designed a complex solution for electronics and other high value type of goods. Pick up and further shipping by rail is available from various parts of China. As a part of the solution, Agility provides GPS tracking of railway containers through the entire haulage. Customers can monitor their cargo on several parameters such as geolocation, container's doors opening, temperature and humidity inside the container, shocks, etc. All these features give an opportunity for Agility to handle hundreds of such containers per month.

### Dedicated warehousing to help a Hi-Tech giant grow its footprint in Russia

When a global Hi-Tech company experienced operational issues with its current freight forwarder, Agility stepped in to resolve the customer's dilemma. First, Agility drew up plans to manage a dedicated warehouse for the customer's regional network development. In addition to providing handling and storing services, Agility is also transporting dismantled equipment to the customer's consolidation warehouse outside Moscow. Beyond warehousing, Agility will also be assisting the customer with expansion plans to more than 15 new locations in Russia and providing domestic cross-docking and transportation services.

### 2367 metric tons delivery for Oil & Gas company

What is the most difficult part of the project of transporting huge, heavy and delicate equipment on a route of several thousand kilometers through several countries and three oceans to an unequipped shore at the edge of the earth? Perhaps, the difficulty is to assemble a team of eight dozen specialists, coordinate their work in several countries, spend hours doing complex mathematical calculations, charter a small ocean fleet and quite a number of vehicles, build platforms for cargo storing and handling with the size of several football fields, find and seal deals with a dozen of sub-contractors? Rather, the main challenge is to deliver the project in less than one year, safely, on time and in compliance with high environmental standards.

The Beach Landing Facility Lunskeye project combines all the core values of Agility – teamwork, integrity, excellence and personal ownership. Successful result is guaranteed.
