About Agility

Agility Sweden is a gateway to global commerce with proven contract logistics and transport expertise. With 45,000 sqm of warehousing space, Agility serves industries throughout the country with storage and logistics. Using Göteborg as its sea gateway and Malmö as its air hub, Agility connects Swedish businesses to international markets. Our own road fleet, supplemented with carefully selected haulers, ensures prompt deliveries within Sweden. We ensure compliance and expedite flows from our customs clearance center, and we offer deep experience in project logistics.

Services

- Air Freight
- Ocean Freight
- Road Freight
- Project Logistics
- Contract Logistics

Customer Examples

Nordic retailer relies on Agility to handle rapidly expanding international trade

A widely recognized lifestyle and do-it-yourself retailer in Nordic countries has a rapidly expanding international trade. It regularly moves sizable volumes of merchandise into northern Europe from China and other points of origin, and it also has significant import via road from European suppliers. The company selected a range of Agility's supply chain offerings to manage these demands. Agility implemented order and exception management controls to enhance visibility into inventory. As a result, the retailer saw distribution and cost management improvements from shipment and order due date controls, equipment optimization, and direct-to-store or direct-to-distribution center bypasses. Beyond those improvements, a factory-to-distribution center network capability boosts deliveries and scheduling. Agility also consolidates shipments from multiple buyers or vendors and provides cross-docking for goods at point of origin and destination.

Making an outsized, 112-ton load airborne for telecom company

Agility faced a huge and heavy challenge when a telecommunications customer required two massive drums of fiber optic marine cables to be moved from Sweden to South Korea. Together the drums weighed 112 tons. Agility gauged the feasibility of moving them by sea and air, and due to the tight deadlines, air was the best option. Agility chartered an Antonov AN-225, the only aircraft capable of carrying a load this substantial. Before being airborne, Agility moved the drums over land from the factory to Stockholm Arlanda Airport. Moving the outsized cargo on specified public highways required licenses and transport at restricted times. Agility's detailed planning and "can do" approach, combined with the extraordinary capabilities of the giant aircraft, got the job done!

Precision scheduling and end-to-end services for global embassies installation

With the clock ticking on an 18-month installation schedule set by the European Union, Agility delivered and helped install a variety of safes weighing as much as 2 tons to embassy offices in capital cities around the globe. Agility activated air, ocean and road freight resources along with ground crews to reach remote locations in Latin America, Cape Verde and Ouagadougou, Africa. Precision scheduling was crucial to meeting the tight timetable; delivery of the safes had to sync with the availability of onsite installers. Agility differentiated itself from competitors by offering end-to-end services for the project. We accomplished every need, from transport to destination, customs clearance, heavy equipment procurement, workforce coordination and, finally, installation of the safes on various floors inside designated residential buildings and embassy offices.
