## About Agility

Agility Ukraine is industry focused with an emphasis on road, ocean and air freight transportation. Agility has proven experience organizing air freight from Canada, United States, Middle East and Asia. Over the past few years, there has been a trend of growth and development of the white goods market in Ukraine. Agility serves the world's premier electronics companies by building logistics frameworks to transport both components and finished goods. FMCG sector is also in scope of Ukrainian business; Agility cooperates with the biggest multinational FMCG companies and organize import and export deliveries by road, ocean and air.

## Services

- Air Freight
- Ocean Freight
- Road Freight
- Project Logistics

## Customer Examples

### **Quality processing system fulfills customer orders more efficiently**

An American multinational confectionery, food and beverage company was confronted with two opposing challenges: Customer requests had to be filled in a short time frame, but it had long-term payment dates. The distance between the factory and ports is 700 kilometers, which increased risk of missed departure and freight pilferage. Temperature control is also essential when shipping consumable products, and the company demanded fixed pricing for two years. Agility used its connections with key maritime lines and relied on existing equipment to help fix pricing. Since July 2015, Agility's introduction of a high-quality system to process customer requests and payments has expedited business. We handled 182 containers in 2015, 308 containers in 2016, and continue to serve the customer in 2017 by delivering all containers on time and within necessary food regulation requirements.

### **Trucking expertise nets two contracts from major multinational firms**

Agility's strong service qualities and extensive expertise in the Ukrainian market led to two important contracts. We are known for exceptional trucking and for making on-time delivery of equipment in perfect condition. That influenced two manufacturers to turn to Agility for their transportation needs. First, a Swedish home appliance manufacturer tapped us to handle exports from a factory in Ivano-Frankivsk, Ukraine, to countries including the Czech Republic, Estonia, Finland, France, the Netherlands, Poland, Russia and Sweden. Agility will also manage the import of large appliances from Poland to a warehouse in Kiev, Ukraine. The total volume is 330 full truckloads (FTLs). Second, for an American personal care products company, Agility will transport 550 FTLs from Russia and the Czech Republic to a warehouse near Kiev.
