About Agility

Agility United Kingdom was established in 1849 and today has 17 key locations across the UK. We strive for excellence, every one of our team is extensively trained to ensure a culture of respect in order to put customer first. Our flat management structure enables us to make important decisions quickly. Working in partnership to analyse your business, apply analytics to find improvement opportunities, design customised solutions, manage implementation, and provide quality assurance. Our solutions team bring you deep expertise, quantitative analytics tools, and industry-leading technology. Servicing multiple vertical industries including life science, retail automotive, hi-tech and industrial. Over 22,000 sqm of open and bonded warehouse space, including temperature controlled, cold and cool chain warehousing and distribution for the Life Sciences and perishable sectors.

Services

- Air Freight
- Ocean Freight
- Road Freight
- Contract Logistics
- Customs Brokerage (including Brexit)
- E-Commerce Solutions
- Supply Chain Solutions
- Project Logistics
- Fairs & Events Logistics
- Chemical Logistics

Customer Examples

Revamped cosmetics supply chain results in lower costs, fresher inventory

When a popular cosmetics brand wanted a lower-cost supply chain with more visibility and fewer carriers, Agility conducted a comprehensive review at the production site in the UK. We streamlined business by consolidating orders and collections, effectively getting the supply chain moving like clockwork. Freight movements were consolidated to eliminate vehicle-waiting time. We managed importation of all raw materials, including organic, fresh or natural ingredients. Agility also handled the export of finished products to retail outlets and ensured that inventory turnover at the retail level took place within four months for optimal freshness. Agility's transformation of the company's supply chain resulted in substantial efficiencies and cost savings.

Pharma product launch team gives global generics provider retail advantage

A global pharmaceutical company specialising in generic products needed to synchronise product delivery to retailers so its new drugs would be first to arrive on shelves after the patent expiration date for existing drugs. Just-in-time market delivery is essential to gain market share. The challenge: Moving products from multiple production sites to several delivery points, and timing arrivals to coincide with patent expiration dates. Another challenge: Those dates vary by country. Agility's Product Launch Team maintains compliance to patent expiration regulations, manages product launches, and provides the right equipment for temperature requirements. Now the global company is the first to have its generic drugs available — ahead of its competition.

Control tower solves global pharma company's supply chain woes, saves money

An Ireland-based global pharmaceutical company specialising in generic, branded and bio-similar products was operating a decentralised logistics setup using multiple suppliers. But the company couldn't achieve cost savings and work synergies due to its cumbersome, manual process. Agility developed a global-controlled process and implemented an integrated control tower solution to manage all suppliers and the flow of global air, ocean and road transport. Agility's GDP-compliant solution was completed in less than six months from original concept to design, build and implementation. This one-source setup provided visibility, consolidated data, and information flow through a single point of contact. By heat-mapping the client's supply chain activities, Agility can respond rapidly without disrupting the flow.
